TIMETABLE No. 23

(No. 22 Omitted)

**EFFECTIVE 12:01 A. M.
Sunday, October 31, 1965**

EASTERN STANDARD TIME

General Rules, Regulating the Movement of Trains, are contained in Book of Rules for the Government of the Operating Department, a copy of which must be in possession of each employee in train service while on duty.

This Timetable is not intended for the information of the public nor as an advertisement of the time or hours of any train. The Railway Company reserves the right to vary from it at pleasure.

It is for the information of employees only.

Note time of Cincinnati and Kenova District first-class trains between Vera and East Portsmouth.

SCIOTO DIVISION

SPECIAL INSTRUCTIONS

STANDARD TIME

1. Clocks showing Standard Time are located as follows:
 Williamson—Telegraph Office and Passenger Station.
 Kenova—Yard Office.
 East Portsmouth—Hump and East Yard Offices, Caller's Office.
 Portsmouth—Dispatcher's Office and Trainmen's Room, Passenger Station.
 Joyce Avenue—Yard Office.
 Clare—Yard Office and Enginemen's Register Room.
 Berry—Yard Office.
 Cincinnati Union Terminal—Crew Dispatcher's Office.

REGISTERING

2. Train registers are located and trains will be registered as follows:

(a) Passenger trains will register at Williamson, Portsmouth and Clare. Cincinnati District passenger trains will throw off register to operator at Clare, who will register.

(b) Other trains will register at East Williamson, East Portsmouth, Joyce Avenue and Clare.

(c) Trains originating or terminating at Kenova will register at that point.

(d) The movement of trains on Lenore Branch east of Millstone, Wayne and Hillsboro Branches and Teays and Atomic Spur will be governed by Train Registers located at Millstone, Kenova, Sardinia, Teays Wye and Teays respectively. The first train registering on the Branch or Spur has right thereto without protecting. Other trains must protect against trains registered on the Branch or Spur, except where arrangements are made by Conductors, and when such arrangements are made, they must be in writing, and Conductor and Engineman each given a copy. When such arrangements are made by telephone they must be written out and repeated from written copy, and every precaution taken to guard against error or misunderstanding.

(e) Trains other than the regular shifter must protect themselves when using Nolan Spur or Buck Creek Branch.

(f) Where necessary, Conductor's Check of Train Register (Form C. T. 24-A) will be filled out and delivered to each engineman.

(Note Rules 83 and 590, Book of Rules).

BULLETIN BOARDS

3. Bulletin Boards are located as follows:
 Williamson—Yard Office and Passenger Station.
 Kenova—Yard Office.
 East Portsmouth—Hump and East Yard Offices and Caller's Office.
 Portsmouth—Trainmen's Room, Passenger Station.
 Chillicothe—Freight Station.
 Watkins—Yard Office.
 Joyce Avenue—Yard Office.
 Berry—Enginemen's and Trainmen's Room.
 Clare—Yard Office and Enginemen's Register Room.
 Cincinnati Union Terminal—Crew Dispatcher's Office.

(f) Trains moving around Belt Line to River Yard at Kenova are restricted to a speed of five (5) miles per hour over 23rd Street crossing, U. S. Route 60.

(g) Location of Measured Test Miles.

Kenova District:

For westward trains, MP 480 to MP 481, between Nolan and Naugatuck.

For eastward trains, MP 595 to MP 594, between Wheelersburg and Franklin Furnace.

For eastward trains, MP Na-56 to Na-55, at Neal.

Columbus District:

For westward trains, MP 619 to MP 620, between Dugan and Clifford.

For eastward trains, MP 688 to MP 687, between Duvalls and Dix.

Cincinnati District:

For westward trains, MP C-101 plus 800 ft. to MP C-100 plus 800 ft., between Book and Rushtown.

For eastward trains, MP C-14 plus 2900 ft. to MP C-15 plus 2900 ft., between Ancor and Perintown.

Enginemen will carefully check the speed over the test mile and report any inaccuracy observed in the speedometer.

STATIONS WHERE TIME IS NOT SHOWN AT WHICH TRAINS WILL STOP ON SIGNAL

5. Nos. 25 and 26 at Crum to discharge or pick up revenue passengers.

Regular eastward passenger trains stop at Winton Place and Norwood (PRR station).

Regular westward passenger trains stop at Norwood (PRR station) and Winton Place, to discharge passengers.

No. 3 stop at Winton Place daily to discharge U. S. Mail from postal car.

GENERAL

6. Eastward or northward trains are superior to trains of the same class in the opposite direction. Note Rule No. 72, Book of Rules.

7(a). The movement of scale test cars is confined to local freight trains and shifters. They must be handled on the rear and at a speed not exceeding 30 miles per hour.

(b) Unless otherwise provided, freight trains handling clam shells, ditching machines, derrick cars, pile drivers and similar equipment moving on own wheels, are restricted to a speed of 45 miles per hour and when such equipment is handled in other than local, wreck or work trains, it must be placed at the rear with the boom end trailing.

These restrictions do not apply when such machines are loaded on a car with the boom or rotating mechanism properly secured.

(c) Occupied camp cars, when handled in other than local or work trains, must be placed at the rear, and when handled in trains requiring a pusher, the pusher must be placed ahead of such cars.

8. When mixed consists of freight and passenger units are used to handle passenger trains, the passenger unit should be coupled next to the train.

9. When handling, dead-in-tow, two or more T-6 switching units or other diesel units equipped with swivel type couplers, a car with rigid shank couplers must be placed between each of the units having swivel type couplers.

10. When a train or engine is stopped by a Stop and Stay signal governing movement over a dual-control switch, if no conflicting movement is evident, a member of the crew must immediately communicate with the control machine operator.

The operator must initiate code or control action from the control machine to ascertain that the switch or switches in the route are indicating properly on the control machine. If the switch or switches are indicating properly, the operator may grant permission for the train or engine to proceed by the Stop and Stay signal.

If the control machine operator cannot obtain proper indication for the switch or switches in the desired route, movement must not be authorized until they have been placed on hand operation. Before authorizing the dual-control switch or switches to be placed on hand operation, the control machine operator must place the lever controlling the switch or switches in the proper position and initiate code or control action for each switch in the desired route.

When authority is received to place a dual-control switch on hand operation, the following procedure must be followed:

Selector lever must be taken out of "motor" (or Power) position and placed in "hand" position and locked, if lock is provided.

Hand throw lever must be operated until switch points are seen to move with the movement of the hand throw lever.

Switch must then be lined and locked for the route to be used.

Selector lever must be left in "hand" position until entire train or engine has cleared the switch.

Unless otherwise instructed by the control machine operator, switches must be restored to "motor" (or Power) after the movement is completed.

If the switch or switches in the desired route cannot be properly lined by hand, they must be spiked before a movement is made over them.

Switches in the route to be used must be observed to ascertain that they are properly lined.

Note: Instructions for operating dual control switch machines are posted inside the telephone box near each of these machines. The machines must not be operated until the instructions are clearly understood.

11. In order to further designate position light Stop and Stay signals, an additional plate bearing the letter "S" has been attached to the number plates of all position light Stop and Stay signals, other than dwarf signals.

13. Rule 21, Book of Rules is Modified as follows:

(a) The use of white classification signals will not be required in double track territory. All freight trains will be considered as extra trains.

(b) The use of white classification signals will not be required on single track where Traffic Control is in service, as covered by Rule 261. All freight trains will be considered as extra trains.

14. White porcelain insulators have been installed on certain portions of the Railway's communication pole line to indicate the dispatcher's circuit. Portable telephone users, when hooking up telephones, will connect to this circuit.

Caution must be exercised to see that connections are made only to the Railway's communication pole line. At some locations power companies, where their lines cross our tracks or parallel our tracks either on or off the right of way, use white insulators.

15. The definition of "Engine" as shown on Page 10, Book of Rules, is modified to read: "ENGINE—A unit propelled by any form of energy, or a combination of such units operated from a single control, used in train or yard service."

16. The second paragraph of Rule 102(b), Book of Rules, is modified to read: "Trains having trouble will flag following trains around with least delay."

17. The second paragraph of Rule 346, Book of Rules, is modified to read as follows: "At points other than in yard limits, and between the outer switches of passing tracks crews must protect before entering main track, regardless of indication of switch indicator. Trains entering main track under above conditions will run at low (restricted) speed to next automatic block signal."

18. Rule 15(a), Book of Rules, is modified to read as follows: "In automatic block signal territory, fuseses and torpedoes will be used by trainmen of trains carrying passengers as prescribed by Rule 99, and by trackmen and bridgemen when tracks or bridges are unsafe or obstructed, but will not be used by freight trainmen except in emergency and as prescribed by Rule 99 when entering the main track at hand-operated switches where indicator is in stop position, or in the absence of an indication."

19. Rule 445, Book of Rules, is modified to read: "When handling or switching passenger equipment or occupied camp cars, air hose must be coupled and air cut in, and extreme care used to avoid injury to those working in or around such equipment. Passenger trains should not be switched from both ends at the same time when practicable to avoid it, and when necessary to do so, every precaution must be exercised to avoid accidents. When practicable, clerks working in parked RPO cars should be notified before the cars are coupled to or moved."

20. The headlight will be displayed to the front of every train in road service by day and night. The first sentence of Rule 17 and the first sentence of Rule 584, Book of Rules, are amended accordingly.

The headlight of all engines will be dimmed during day and night while standing in yards or terminals.

22. Trains or engines delayed for any reason when approaching a grade crossing protected by automatic gates or flashing light signals, or after having been stopped by signal indication displayed by the first automatic signal in advance of such protected crossings, must approach the crossing prepared to stop and must not move over the crossing unless the automatic protection is operating or the crossing is protected by a member of the train crew or by a flagman.

23. An employee ordered to go on duty before expiration of his legal off-duty period under the Hours-of-Service Act, must report the fact to the proper office before going on duty.

24. When speed of trains handled by diesel electric units remains below 12 miles per hour for passenger type units, or 10 miles per hour for freight type units for more than 10 minutes continuously with throttle in maximum position (No. 8), there is danger of damaging the traction motors. Under these conditions engine crew should stop and call the Dispatcher for instructions.

In consists where freight and passenger units are mixed, the most restrictive speed (12-MPH) shall apply. Reducing the throttle position from No. 8 position at low speed does not protect traction motors from heating in the overload time limit period.

25. The maximum speed of motor cars, burro cranes, clam shells, and other self-propelled track machines must not exceed twenty (20) miles per hour at any point, and must be reduced to six (6) miles per hour over switches and frogs, and while passing trains on the opposite track, through station grounds, or where pedestrians are likely to be struck. The speed of motor cars, burro cranes, clam shells, and other self-propelled track machines when approaching all grade crossings must be reduced so that positive stop can be made before entering crossing if occasion demands, and they must not move over a crossing at a speed in excess of six (6) miles per hour. Warning must be sounded continuously through stations, tunnels and while passing trains or cars running or standing on adjacent track, and while approaching or passing over all grade crossings.

26. The last sentence of the first paragraph of Rule 211, Book of Rules, is modified to read:

"But when delivery to enginemen will take the operator from the immediate vicinity of his office, the engineman's copy will be delivered by conductor or trainman."

27. The maximum tractive effort of a locomotive consisting of five four-axle diesel units is close to the designed strength of a car coupler and for this reason tonnage of any one train must not exceed the slow freight rating for five four-axle units. However, for the purpose of balancing power, a maximum of six units may be used in a locomotive consist with multiple unit control, provided care is exercised to see that the maximum tractive effort used does not exceed that of five four-axle units.

Because of the large amount of braking effort available on a locomotive consist having more than 20 axles, the dynamic braking of such locomotives must be handled carefully to prevent damage to train.

30. The first sentence of the first paragraph of Rule 314, Book of Rules, is modified to read:

"When a block signal is changed from Stop to Proceed when a train approaches, it will indicate that the block is clear to the first switch at the next open block station ahead."

The third paragraph of Rule 314, Book of Rules, is modified to read:

"Rule 99(b) must be observed at all stations, yards and passing sidings regardless of block signal indications, except at closed stations and intermediate passing sidings between open block stations when proceeding on clear block indication."

31. Rule 15, Book of Rules, is modified to read:

"In automatic or manual block signal territory the explosion of two torpedoes is a signal for enginemen and trainmen to look out for flagman or other signal. In other than automatic or manual block signal territory, the explosion of two torpedoes is a signal to proceed at low (restricted) speed. The explosion of one torpedo will indicate the same as two, but the use of two is required.

Torpedoes must not be placed at stations or on public crossings.

Enginemen must acknowledge the explosion of torpedoes by their train or engine by sounding engine whistle signal prescribed by Rule 14(1), Book of Rules."

32. In traffic control territory, trains or engines must not foul or enter the main track or a signaled siding at hand-operated switches without first obtaining authority from the traffic control operator. Maintenance of Way employes and others concerned must not operate such switches without first obtaining permission from the traffic control operator.

Unless otherwise provided, where authorized speed is in excess of 20 miles per hour, trains or engines must not clear the main track by entering an auxiliary track through a hand-operated switch not equipped with electric lock.

Trains or engines using tracks on which they are not permitted to clear must leave part of the train on the main track or leave switch open until work is completed.

33. A train order fixing a meeting point must specify which train will take the siding.

Form A of Forms of Train Orders, Book of Rules, is modified accordingly.

34. Rules 86(c), 99, 99(b) and 99(c), Book of Rules, are modified to the following extent:

When trains and engines are operating under Automatic Block Signal System Rules, flag protection against following movements on the same track is not required.

35. Rules 19, 19(a) and 19(b), Book of Rules, are changed to read as follows:

"19. To indicate the rear of trains, a red flag by day and a lighted red lantern by night will be displayed on the rear.

Both day and night, a lighted red lantern will be displayed on the rear of trains operating through tunnels.

19(a). When engines or cars are permanently equipped to display fixed red electric marker lights on the rear, these may be used, both day and night, in lieu of the prescribed signals.

19(b). In Non-Automatic Block Signal territory, when a train is clear of the main track to be passed by a train, red lights will be extinguished or concealed and a white light displayed.

36. Employes are prohibited from mounting the top of Hy-Cube box cars except as may be necessary in the course of repairs. These cars are identified by a white reflectorized strip painted across the top of each end of the car and stencilled EXCESS HEIGHT CAR.

LOCAL

100. Automatic Block is in effect between:

Williamson and eastward home signal C. W. Tower, Joyce Avenue.

Naugatuck and Millstone Yard.

Vera and Clare.

Clare and Signal 3, at PRR crossing Idlewild.

Signal 3 and eastward interlocking signal at Bond Hill.

100(a). Between Williamson and Portsmouth, except where Traffic Control is in service, trains and engines moving with the current of traffic will run with reference to other trains in the same direction by block signals, the indications of which will supersede the superiority of trains.

The train dispatcher or operator must be advised in advance of any known condition which will delay the train or engine or prevent it from making usual speed.

100(b). At the following crossings there is a section of track 35 feet or more in length which is dead in connection with the Automatic Signal System, and if equipment is left standing on these dead sections, it will not affect the automatic signals:

B&O at G. S. Tower, Portsmouth.

B&O at Renick and Chillicothe.

PRR at Circleville.

C&O at Valley Crossing.

NYC at Bannon.

PRR at Clare.

When necessary to leave detached equipment standing on these crossings, it should be left on either side of the dead section or be protected by flagman, and the lever man notified immediately.

101. Traffic Control is in service as follows:

Between Naugatuck and Millstone Yard.

Between Naugatuck and East End Tunnel No. 1.

Between double crossovers east of Kenova and double crossovers South Point.

*On eastward main track between east end Star Yard and G. S. Tower.

*On eastward and westward main tracks between G. S. Tower and Portsmouth Passenger Station.

Between M. P. N-642, plus 780 feet, west of Omega and M. P. N-656 plus 4823 feet, Chillicothe.

Between Vera and Clare Interlocking.

When Traffic Control is in service, trains not scheduled by timetable or train order will proceed extra on signal indication. (Note Rules 261, 263 and 264, Book of Rules.)

*Within Traffic Control limits on eastward main track between east end Star Yard and G. S. Tower and on eastward and westward main tracks between G. S. Tower and Portsmouth Passenger Station, permission must be secured from the operator at G. S. Tower before reversing any hand-operated switch or removing padlock from an electric lock.

102. At the following stations, trains will get a Clearance Card before leaving:

- East Williamson—Westward trains.
- Kenova—Trains originating.
- G. S. Tower—Cincinnati District westward freight trains.
- Portsmouth—Passenger trains.
- Clare—Eastward trains.

103. Hand-operated switches must not be thrown nor cross-over movement made within the passing siding limits at Stonecoal, Prichard, Waverly or Dorney without first securing permission from the Operator at Kermit, Operator at Kenova, Dispatcher at Portsmouth or the Operator at Circleville respectively.

104. "Inspect Train" indicators are located as follows:

On south side of eastward track near M. P. Na-10, east of Crum, and on north side of westward track west of M. P. Na-17, west of Tunnel No. 7. Controlled from Kermit.

On north side of westward track near M. P. Na-52, west of Cyrus, and on south side of eastward track just east of double crossovers east of Kenova. Controlled from Kenova Tower.

On north side of westward track near M. P. N-572, two miles west of crossovers South Point. Controlled from Kenova Tower.

On south side of eastward track at Mile Post 574 plus 2900 feet, one mile east of Coal Grove. Controlled from Kenova Tower.

On south side of eastward track at west end of eastward passing siding at Waverly and on north side of track at west end of single track Lunbeck. Controlled from Renick Tower.

On south side of eastward track at west end of eastward passing siding at Dorney. Controlled from Circleville Tower.

When a red light is burning on these indicators or in the absence of any light on these indicators, train will make a normal stop, between switches where practicable, and a member of the crew will communicate with the station controlling the indicator for information and instructions. When a green light is displayed on these indicators, it will indicate stop for inspection is not necessary.

Note: The display of a green light on these indicators does not relieve crew members of compliance with Rules 106 and 413, or other applicable rules.

105. Rule 21, Book of Rules, is modified as follows:

The use of white signals on extra trains is not required on branch lines.

106. Rule 438, Book of Rules, is supplemented as follows:

Conductor must make record in his train book of the caboose gauge pressure when leaving terminals and approaching Stonecoal, Kenova, Glen Jean, Peebles, Mt. Zion, Sardinia, Eastwood and Afton.

107. Refer to General Timetable Rule No. 7. This type of equipment moving on own wheels will not be handled in Trains 77, 78, 84, 85, 86 and 99 on the Kenova and Columbus Districts, except in case of emergency.

108. When freight trains clear by rule or train order, a member of the crew will promptly report clear to the train dispatcher.

This rule is not applicable in Traffic Control territory, but when a train has been put in siding and stop has been made, a member of the crew should communicate with the train dispatcher promptly.

109. Green lantern signals will be used during the hours of darkness by switch-tenders at Sycamore to control movement of trains entering or leaving Williamson Yard.

110. When Scioto Division crews are required to take trains to the storage tracks on Pond Creek Branch, they will secure permission from Yardmaster at Williamson.

111. Vestibule doors or traps must not be opened at Kenova until passenger trains have stopped at the station.

112. At Glen Jean, N&W will use D. T. & I. main track from N&W eastward main track switch to the main track switch leading to the south end of the D. T. & I. interchange track to pick up their cars. All N&W and D. T. & I. trains and engines will approach and move over this portion of main track with caution, expecting to find N&W and D. T. & I. trains or engines moving unprotected in either direction.

113. At Renick, Nos. 1 and 2 tracks in B&O yard are designated as interchange tracks for receipt of N&W deliveries. Westward trains having deliveries for B&O at Renick and receiving "Restricting" indication on Signal No. 022L, will stop and make cut so as to leave rear of train clear of Southern Avenue, then pull around east leg of wye to B&O yard, contacting Operator at Renick Tower for instructions before fouling B&O main track. Road crossing near the middle of Nos. 1 and 2 tracks must be cut if necessary.

Movement of N&W trains and engines in B&O Renick Yard will be governed by B&O Rule No. 94, which reads as follows:

"On yard tracks, movements must be made at such speed that stop can be made to prevent accidents. At points where tracks converge, caution must be used to prevent accidents when entering or leaving tracks.

"Engine and train crews must be on the alert to prevent accidents. Firemen must assist engineer in maintaining look-out both ahead and behind the engine and promptly call attention to any condition which might cause an accident."

114. Engines heavier than GP-9 diesel must not be used on bridge over Cleveland Avenue, Columbus.

115. The main tracks of the Norfolk and Western and the P. R. R. between Columbus and CW Tower, Joyce Avenue, are used jointly as a section of double track; west or southward trains approaching Columbus use the Norfolk and Western track; east or northward trains leaving Columbus use the P. R. R. track. Yard engines will keep clear of passenger trains of both railroads on double track, and protect themselves while using crossovers.

116. Engines must not pass beyond frog of middle track at Taylor Stone Co. plant at McDermott.

117. To avoid damage to engines from falling crusher dust, they must not be permitted to move under the tippel at Plum Run.

118. Close clearance on west truss span of Bridge 2080 over Miami River at Clare.

119. The track between Clare, Idlewild and Ivorydale is operated as a block for all trains and engines, controlled by Operator at Berry, under direction of Terminal Trainmaster.

120. Between Clare and Cincinnati, N&W passenger trains are operated over the P. R. R., B. & O., and Cincinnati Union Terminal Company. Between Idlewild and Court Street Station, Cincinnati, trains and engines are operated over P. R. R.

121. Train and enginemen operating over the P. R. R., B. & O., and Cincinnati Union Terminal tracks must provide themselves with and be governed by their timetables and Books of Rules.

122. Telegraph Offices, which are also Train Order Offices, not open continuously, will be open daily except Saturdays, Sundays and holidays, as follows:

Sciotoville.....	7:15 A. M. to	4:15 P. M.
Lucasville.....	8:00 A. M. to	5:00 P. M.
Piketon.....	7:00 A. M. to	4:00 P. M.
Kingston.....	7:00 A. M. to	4:00 P. M.
Ashville.....	7:00 A. M. to	4:00 P. M.
Peebles.....	7:00 A. M. to	4:00 P. M.
Sardinia.....	7:00 A. M. to	4:00 P. M.
Batavia.....	7:30 A. M. to	4:30 P. M.

Telegraph Offices, which are NOT Train Order Offices, will be open, except as noted, daily except Saturdays, Sundays and holidays, as follows:

Wheelersburg....	7:30 A. M. to	4:30 P. M.
Waverly.....	{ 7:00 A. M. to	4:00 P. M. } Daily
	{ 8:00 P. M. to	4:00 A. M. }
McDermott.....	6:00 A. M. to	3:00 P. M.
Winchester.....	7:00 A. M. to	4:00 P. M.
Mt. Oreb.....	7:00 A. M. to	4:00 P. M.
Williamsburg....	7:45 A. M. to	4:45 P. M.
Newtown.....	7:30 A. M. to	4:30 P. M.
Hillsboro.....	8:00 A. M. to	5:00 P. M.

Note: Macon, Ohio, is a commission agency.

YARD LIMITS

123. Yard Limit signals, at other than terminal yards, are located at:

Millstone	Coal Grove
Neal	Ironton
Kenova	Chillicothe
	Watkins Yard

124. LOCATION OF SPRING SWITCHES

Nolan.....	East and west ends of Storage track.
Stonecoal.....	East end of Passing Siding.
Webb.....	East and west ends of Passing Siding.
Glenhayes.....	East and west ends of Passing Siding.
Hewlet.....	West end of Passing Siding.
*Prichard.....	West end of Passing Siding.
*Union.....	East and west ends of Passing Siding and crotch switches at east and west ends of Passing Siding.
Gennetts.....	West end of Passing Siding.
Dugan.....	West end of Passing Siding.
Waverly.....	East end of Eastward Passing Siding and west end of Westward Passing Siding.

124. LOCATION OF SPRING SWITCHES (Continued)

- *Delano..... West end of Passing Siding.
- Dorney..... East end of Eastward Passing Siding and west end of Westward Passing Siding.
- Ritts..... West end of Passing Siding.
- Dix..... West end of Passing Siding.
- Joyce Ave..... East end of Running Track, east of JO Tower.
- Clare Yard..... Westward pull out switch.
- Idlewild..... Junction switch, switch at west end double track—near Mentor Avenue, crossover switches east of Dana Avenue, and switch leading from westward track to old CL&N.

Note Rules 339(a) and 352, Book of Rules.

*When a train or engine moving against the current of traffic encounters a stop indication on the dwarf signal governing movement over spring switch at the west end of Prichard, east or west end of Union, or the west end of Delano, in addition to complying with the above rules, it must not proceed until permission to pass the signal has been obtained from the Operator at Kenova or Renick, unless otherwise provided.

125. LOCATION OF OUTSIDE TELEPHONES

Outside telephone boxes equipped with locks must be locked immediately after use.

Outside telephones are located at all Stop and Stay signals, at each end of all passing sidings, junction points, main track crossovers, and electric lock switches.

RAILROAD CROSSINGS

126. The rules and regulations provided by Section No. 3333, Revised Statutes of Ohio, respecting crossing of two (2) railroads at a common grade, where interlocking devices are not installed or maintained, are as follows:

FOR THE GOVERNMENT OF EMPLOYEES ON ENGINES AND TRAINS

(a) All trains or engines passing over such tracks shall come to a FULL STOP not nearer than two hundred (200) feet, nor further than eight hundred (800) feet, from the crossing.

(b) Trains or engines MUST NOT cross said crossings until signaled to do so by the Signalmen or Watchmen, nor until the way is clear.

(c) When two passenger or freight trains approach the crossing at the same time, the train on the road first built shall have precedence, if the tracks are both main tracks over which all passenger and freights on the road are transported.

(d) If only one track is such main track, and the other is a side or depot track, the train on the main track shall take precedence.

(e) If one of the trains is a passenger train and the other a freight train, the former shall take precedence.

(f) Regular trains on time shall take precedence over trains of the same grade not on time.

(g) Engines with cars attached not on time shall take precedence over engines without cars attached not on time.

The laws of Ohio command a strict compliance with the foregoing rules and regulations, and they must be obeyed.

RAILROAD GRADE CROSSINGS WITHOUT INTERLOCKING DEVICES

(h) At Big Four crossing at Ivorydale, trains and engines shall not proceed until track is plainly seen to be clear.

RAILROAD CROSSINGS INTERLOCKED

(i) Interlocking is in service at crossings of P. R. R. at Circleville, Clare, and Idlewild; N. Y. C. at Bannon; C. & O. at Valley Crossing; B. & O. at Chillicothe, Renick, Gallia Street, Portsmouth, and Bond Hill; D. T. & I. at Ironton. Trains and engines approaching and using these crossings shall be governed by Interlocking Rules and Special Instructions.

(j) At Idlewild push buttons have been installed in boxes located in the vicinity of the signals governing movements across the PRR crossing and Dana Avenue. If a train or engine is delayed in the approach to these signals, the signal will change to a Stop and Stay position. One of the train crew will then operate the push button nearest the signal and if conditions warrant the signal will clear after an allotted time.

Tonnage Ratings and Weather Reductions for Diesel Electric Engines (Per Unit)

*Normal tonnage rating for No. 78 is 1100 tons per 4-axle unit and 1650 tons per 6-axle unit.

When combinations of units are used, add single ratings.

In case of extraordinary weather conditions, Dispatchers shall make further reductions, if necessary, to keep trains moving.

COMPANY SURGEONS

Dr. W. R. Whitman, Jr. System Surgeon Roanoke, Va.
 Dr. R. A. Salton Assistant Surgeon Williamson, W. Va.

 Dr. R. W. Zollinger Surgeon Columbus, Ohio
 Dr. G. J. Heer Assistant Surgeon Columbus, Ohio
 Dr. Ivor G. Clark Ophthalmologist Columbus, Ohio
 Dr. William T. Paul Assistant Surgeon Columbus, Ohio

FIRST AID TO INJURED

A. In accidents to persons, the ranking employee of the Company present will take command and direct proceedings for the relief of the injured.

B. When there is danger from fire, remove all persons promptly from the train, looking first to those who may be helpless from injury or jammed in the wreck.

C. Take hold of the injured gently, but firmly, and without fear. Lay the injured one down on cushions, blankets, clothing or straw, where he will have perfect ventilation and not be in a draught or strong current of air. Loosen the clothes about the neck and body to permit easy breathing, and place the injured part in the position most comfortable to the sufferer. Do not permit strangers to approach and talk to or ask the injured one questions. Place him, if possible, in charge of one or two friends, and keep him warm with proper covering.

D. As soon as practicable, summon the nearest Surgeon of the Company, and notify the Superintendent by telegraph. State the number of persons injured, and the nature and extent of the injuries, as clearly as time will allow, in order that the Surgeon may come with what is needed.

E. BLEEDING—If the bleeding is from the limbs, keep them bent and the bleeding points elevated as much as practicable.

F. In case of broken bones, place the injured part in the most natural position, or, if this cannot be done, then in the position most comfortable to the patient. Having done this, seek to steady the limb, either by splints of wood or by a pillow folded around the limb and tied in the desired position. In case of broken ribs, relief will be afforded by a wide bandage around the chest drawn as tightly as can be borne. When a broken bone is suspected, do not move the limb about to find out if this is so.

G. In case of burns or scalds cover the parts with a paste made of baking soda and water.

H. When there is much weakness from an injury, whiskey may be given in small quantities, say from one to two tablespoonfuls, to be repeated at short intervals, if necessary. Large quantities must not be given and no whiskey must be given if the head is injured. In all cases of weakness from shock or loss of blood, keep the patient warm.

I. Cold water, ice, tea, coffee, milk or soup may be freely allowed to all injured ones who wish them.

J. In moving an injured person, place a board, door, shutter or mattress, with one end at the patient's head, and lift or slide him gently on it. If the patient can sit up, he may be carried in a chair or upon the locked hands of two persons, around whose necks he throws his arms to steady himself.

K. When forwarding a patient who has been seen by a Surgeon, obtain from the Surgeon a written statement as to his opinion of the nature and extent of the injuries, and attach this statement, along with the name of the injured one (if it can be obtained), securely to his clothing.

L. When the injured person is able to be moved, take or send him to the nearest Surgeon of the Company in the direction in which the first train is moving. It can then be decided whether the patient will be treated there or taken to some other point.

M. When the injured person is not able to be moved, place him in charge of Station Agent, Section Foreman, or some official of the Company, and summon the Surgeon of the Company most easily obtained.

N. In urgent cases, if no Surgeon of the Company can be promptly had, summon the nearest Physician to take charge of the case until the Company Surgeon arrives.

O. In a general emergency, summon the Surgeons of the Company in both directions and wire the Superintendent if more Surgeons are needed.
